

Test Accounts & Scenarios

Every login and every prepared record for validating ibrave OS.
Each account carries a single role so permissions can be proven in isolation, and the data covers at least one record in every state of every workflow.

12 Suggested test pass

Handle as credentials. These passwords open real accounts on the hosted environment. Share this document only with the testing team, and rotate the passwords from Admin, People before the platform carries real client data.

01 Standard accounts

The realistic company set, several roles each, with history behind them. Use these to see the product as a working team would. Password for all five: `password123`

EMAIL	ROLES	WHAT IT IS FOR
owner@ibrave.co	owner, admin	Sees everything, including the Command Center and alert rules
pm@ibrave.co	pm, employee, resourcing	Approvals and staffing, a realistic delivery lead
finance@ibrave.co	finance	The full money loop, rates through payouts
dev1@ibrave.co	employee	An ordinary employee with logged history
dev2@ibrave.co	employee (contractor)	Contractor variant of the same

02 Role test accounts

One role each, so what a role can and cannot do is provable without interference. Password for all twelve: `Passw0rd!Test`

EMAIL	ROLE	WHAT IT PROVES
test.admin@ibrave.co	admin	Admin without owner: user lifecycle, roles, settings, templates. Must not reach the Command Center
test.pm@ibrave.co	pm	Approves only on their own projects. Must not see money screens
test.finance@ibrave.co	finance	Invoices, payouts, rates, exports. Must not approve time
test.sales@ibrave.co	sales	Prospects, pipeline, quotes, win handoff. Must not see cost rates
test.recruiter@ibrave.co	recruiter	The whole talent pipeline. Must not see invoices
test.resourcing@ibrave.co	resourcing	Bench, staffing requests, skills. Bench cost must stay hidden
test.account@ibrave.co	account_owner	Account 360, opportunities, escalations
test.employee@ibrave.co	employee	The baseline: own timesheet and own payouts, nothing more. Has assignments and skills
test.multi@ibrave.co	pm + finance + sales	The union of three roles in one session
test.mfa@ibrave.co	employee	Two-factor is mandated: forced enrollment at login, the factor cannot be removed
test.inactive@ibrave.co	employee	Deactivated: sign-in must be refused ("User is banned")

EMAIL	ROLE	WHAT IT PROVES
test.nocost@ibrave.co	employee (contractor)	Has hours but no cost rate : margin gap and reconciliation flag

One more account. test.contractor@ibrave.co exists from earlier administration testing and carries an enrolled authenticator factor. Its password was rotated during that testing, so reset it from Admin, People if you need it.

03 Clients and projects

RECORD	STATE TO EXERCISE
Northwind Trading NWND	Tier A, USD, Net 30, Europe/Dublin local clock, has an account owner
Umbra Systems UMBR	EUR, Net 14, overdue invoices and an open escalation, red health score
Solstice Retail SOLS	Net 45, retainer project, deliberately has no account owner
Northwind Platform, Umbra Migration	Active time and materials, effective-dated rate cards (the rate rose 30 days ago, so old work must still bill at the old rate)
Solstice Support	Retainer billing, 40 included hours, overage rate above that
Northwind Archive	Closed project, must not accept new time

04 Time entries

Prepared on the test employee, covering every status a timesheet cell can hold.

- Draft, freely editable
- Submitted, locked awaiting approval
- Approved and billable
- Approved but internal, never invoiced
- Rejected back to draft, carrying the reason
- Hours against a second client
- Contractor hours, different cost rate
- Retainer hours, plus a booked vacation

05 Invoices and collections

One invoice per state. Search the tag in the invoice list to find each.

TAG	STATE
TEST-DRAFT	Draft: lines editable, can be deleted, releases its entries
TEST-COURTESY	Issued, due in three days, the courtesy reminder stage
TEST-OVERDUE7 / 14 / 30	Overdue at exactly 7, 14 and 30 days, one per escalation stage
TEST-PARTIAL	Partially paid, one third recorded

TAG	STATE
TEST-PAID	Fully settled
TEST-VOID	Voided with a stated reason
TEST-CREDIT	Credit note against the paid invoice, negative total

Guards worth attacking: overpaying an invoice, paying a voided invoice, editing an issued invoice, and deleting anything that is not a draft. All four must be refused with a readable message. Then try pausing dunning and the bank statement matcher.

06 Sales pipeline

A lead sits at **every stage**: lead, qualified, proposal sent, negotiation, won, and lost with a stated reason.

Quotes: one sent, one superseded, and the accepted second version that replaced it.

Contracts: one renewing in 30 days, one in 60 days, one already expired, and one open-ended with no renewal date.

07 Prospecting

Prospects in every status: active, do-not-contact, disqualified and converted. The do-not-contact record must refuse cadences and conversion outright.

Sales tasks are waiting both **overdue** and **due today**, and a three-touch cadence is defined and ready to start on the active prospect.

08 Accounts and health

Opportunities in all four stages: idea, proposed, won and lost.

Escalations: one **open** on Umbra Systems, which must pause the overdue reminder tone while still allowing the courtesy reminder, and one already **resolved**.

09 Staffing

Requests in **open** and **cancelled** states. Fill the open one and confirm the suggested candidates rank by skill match first, with availability only breaking ties.

The bench shows an under-allocated person, a fully committed person, and upcoming time off.

10 Talent pipeline

A candidate waits at **every stage**: sourced, screening, interview, assessment, offer, hired, rejected with a reason, and parked in the talent pool.

The hiring gate. The offer-stage candidate has a submitted scorecard, so hiring succeeds. The interview-stage candidate has an unsubmitted round, so hiring must stay blocked until someone completes it.

Requisitions: one open with two seats, one already filled. The hired candidate carries a full onboarding checklist.

11 Calendar

One event in the past, one today, and one next week with an external guest, so the past, present and future colour coding and all four summary counts have something to show in both month and week views.

12 Suggested test pass

- ① Sign in as each role account and confirm the sidebar matches the role matrix exactly, no more and no less.
- ② Confirm the deactivated account is refused, and that the two-factor account is forced into enrollment before it can reach the workspace.
- ③ As the employee account: log time, submit the week, then confirm the entries lock and can no longer be edited.
- ④ As the project manager: approve part of that week, reject one entry with a comment, then confirm the employee's copy returns to draft carrying the reason.
- ⑤ As finance: generate a draft from approved work, issue it and check the numbering format, try to edit it (must fail), record a partial payment, then raise a credit note.
- ⑥ As sales: drag a lead one stage forward on the board, then run the win handoff and confirm a client, contract, project and staffing request all appear.
- ⑦ As the recruiter: try to hire the interview-stage candidate (blocked for want of a scorecard), then hire the offer-stage one and confirm the onboarding checklist appears.
- ⑧ Across every list: use the search box, the filter dropdowns and the bulk selection bar, and confirm a filtered-out row can never be caught by a bulk action.
